

NABIT Update - Cascade Plus Filter System – October 2018

What is it?

A new high efficiency grease filter and filter frame for new and existing kitchen hoods that reduces nightly cleaning, labor, and may reduce annual grease duct cleaning frequency**.

**** Note - Quarterly third-party professional duct and hood inspections are still required to for all hoods to comply with fire code regulations. The results of this quarterly inspection will determine if grease duct cleaning is necessary at that time.**

What is new?

New stainless steel filter frame with disposable, biodegradable filter media. The filter media should be replaced in the grill hood filters at a minimum every week. Filter media in fileet and fry hood filters should be replaced at a minimum every month. Stainless steel frames should be removed for cleaning monthly, or more often as determined through visual inspection.

What are the benefits?

Reduces:

- Nightly filter cleaning
- Water usage
- Chemical use
- Grease build up in ducts, on fans and roof
- Reduces Air pollution
- Grease build up on rooftop and HVAC condenser coils

How do I get started/implemented?

Contact your local KES to receive survey which walks you through selecting the correct size and quantity.

The ordering contact for Franke and H&K will be as follows:

- Franke 800-423-5247 fs-frankeparts.us@franke.com
- H&K 800-521-3987 chicago.customerservice@hki.com

How do I get this product?

Completion of the survey will result in the generation of a quote. Place and order with your local KES when you are ready to receive your filters.

What is the timing?

Currently available

What is the cost?

Stainless steel filter \$103 USD
\$208 USD for a case of 40 wool filters

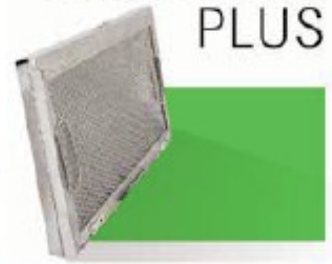

Where do I go for more information?

Contact local KES or If there are additional questions, please contact: Mark Ashley at (615) 256-6211 or mark.ashley@franke.com

Most Effective

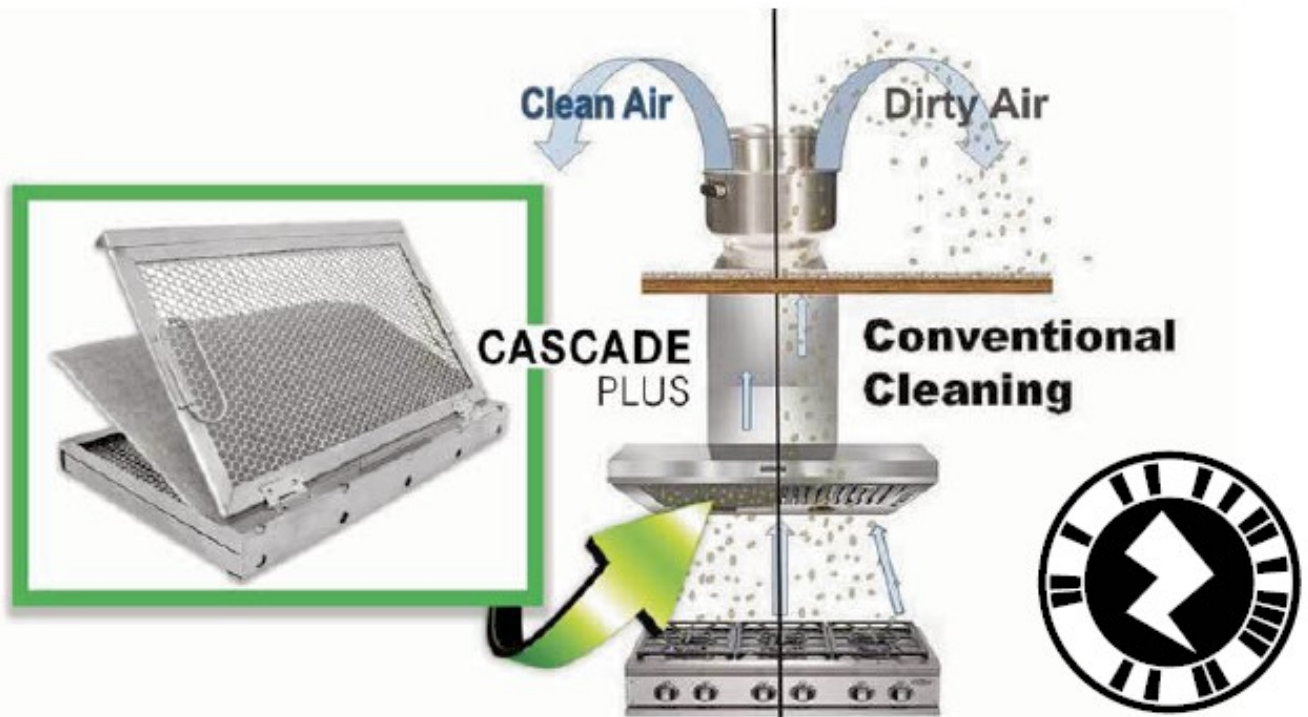

CASCADE PLUS

Disposable Grease Filter in Commercial Kitchen Ventilation.

Disposable grease filters offer the best solution for kitchen exhaust filters, as they capture up to 98% of the grease particles compared to some regular metal baffle filters, that only capture between 18-20% of these same grease particles.

Grease Lock filters are easily installed and can be disposed with your regular rubbish. Made primarily of wool fibers, the filters are not only fire retardant but also completely biodegradable, compostable and sustainable. Grease Lock filters are available in all standard industry sizes and retrofit to all kitchen exhaust systems without any modifications.
